In our neurovascular surgery program, we focus on sophisticated treatments that enhance the ability of our doctors to minimize damage and maximize the benefits of surgery. Hold weekly meetings to determine the treatment options that give patients the best chance to return to normal functioning.

**Neurovascular Diseases and Disorders Surgery Program**
Managing Vascular Diseases of the Brain. Our team of vascular neurosurgeons diagnose, treat, and manage all vascular diseases and disorders of the brain, including: carotid artery stenosis, intracerebral aneurysm, arteriovenous malformation, and stroke. In addition to providing clinical expertise, our access to the latest research findings and state-of-the-art facilities and imaging services enables us to consistently improve patient outcomes and the overall patient experience.

**Neurovascular Surgery | University of Utah Health**
Neurovascular Surgery Our neurovascular surgeons use catheters to perform procedures in the brain through arteries in the groin, eliminating the need to open the skull. These procedures could vary from finding a blood clot causing a stroke and removing it, to placing coils in the brain to repair a ruptured aneurysm and stop bleeding.
